2. Citations and explanations (Rule 70.7)

Reference is made to the following documents:

D1: US 6337693 B1

D2: US 6282489 B1

D1 discloses an apparatus for displaying a map in a number of resolution levels using vector-based map information (e.g. links, polygons) stored in a database and preferably retrieved over the Internet. The resolution is selected interactively and if a higher resolution is selected additional map data is downloaded from the database (see column 12, lines 4-29 and column 13, lines 30-64).

D2 discloses a device for providing vector-based map data to a travel planning apparatus.

D1 is considered to represent the closest prior art. Independent claims 1, 9 and 10 do not clearly define that the map information data of a higher resolution level is generated when requested, i.e. in real time, by combination of map information data of a lower resolution level with the additional data. It is considered obvious to a person skilled in the art to generate a higher resolution in D1 by disaggregation of links and polygons. Consequently, the subject-matter of independent claims 1 and 9 lacks an inventive step.

What is claimed in claims 2-8 is considered to constitute details, which are known from D1 or are obvious for a person skilled in the art and therefore fails to involve an inventive step.

Supplemental Box

In case the space in any of the preceding boxes is not sufficient.

Continuation of: Box V

It is considered obvious to use the method of providing map information data in a number of resolutions, as known from D1, in a travel planning apparatus known from D2. Consequently, the subject-matter of independent claim 10 lacks an inventive step.

Therefore, the invention claimed in claims 1-10 is novel (N), but lacks an inventive step (IS). The invention is industrially applicable (IA).
